PriorityScore for CollectionsSM

[Buy this product](#)For more information, please contact us at **1 888 414 1120**.

Better modeling – higher collection dollars

Focusing your collection efforts on accounts with the greatest expected dollar value is crucial to optimizing your resources, reducing costs and maximizing dollars collected.

Experian's PriorityScore for CollectionsSM, powered by PredictiveMetricsTM, Inc., is a suite of specially blended, industry-specific scoring models that enable you to segment and prioritize accounts based on cost, effort and impact by knowing expected payment amounts, and probability of payment, from consumers with the capacity to pay.

Increase your liquidations with advanced modeling

Blended models that combine credit and your transactional data on the debtor are more predictive than either one of these data types alone. Models that are specific to your debt type, the age of the debt, and industry are more predictive than generic pooled models. Integrating PriorityScore for Collections into your operations can lead to greater recovery dollars and resource optimization.

Score more accounts – with less effort

Unscoreable accounts can negatively impact your ability to prioritize your portfolio. Experian's PriorityScore for Collections, the most comprehensive suite of collection models offered by Experian, blends fresh credit data with critical account-level information to help you accurately score nearly every account.

Features

PriorityScore for Collections provides you with two scores – a traditional payment score and a unique dollar score – to help you

- Prioritize to focus on the most collectable accounts in your portfolio
- Segment accounts by debt type, debt age and industry
- Maximize existing resources and minimize costs

Bring statistical science to your collections operations, and gain immediate results.
